HERITAGE & MISSION

Architectural Vision & Table of Contents

Founded on the timeless philosophy that living in harmony with nature elevates human well-being, Prefab Wooden Homes (PWH India Venture LLP) engineers bespoke timber homes that merge Scandinavian precision prefabrication with India's diverse topographical and climatic demands.

ENGINEERING PRECISION

CNC Joinery

Components are micron-machined in our controlled facility, ensuring airtight interlocking joinery and eliminating on-site cutting waste.

NATURAL IMMERSION

Biophilic Living

Natural pine and spruce interiors naturally regulate indoor humidity, diffuse warm organic acoustics, and lower resting heart rates.

SEISMIC & THERMAL

15x Concrete Insulation

Solid timber provides 15 times greater thermal resistance than concrete, slashing heating and air-conditioning power bills by up to 60%.

PANORAMIC LIVING INTERFACE

Digital Showcase: The Online Architecture Experience

The official website presents an immersive digital showroom engineered to convey the sensory richness, architectural grandeur, and environmental purity of solid timber residences.

CAPSULE NAVIGATION

Floating Glass Navbar

Biophilic dark forest green glassmorphic header showcasing the metallic gold PWH crest and intuitive typology filtering.

INTERACTIVE CONSULTATION

Instant Quote Portal

Allows prospective landowners to select their plot location, square footage, and typology for tailored architectural costings.

LIVE SYNCHRONIZED CMS

Real-Time Portfolio

Directly coupled to our executive database, dynamically populating newly completed projects and client testimonials.

SIGNATURE LIVING

Prefab Wooden Houses & Luxury Timber Villas

Designed as permanent primary family residences and luxury holiday estates. Engineered with double tongue-and-groove solid log construction, high thermal efficiency, and open-plan cathedral architecture.

SPECIFICATION FEATURE	PREFAB WOODEN HOUSES	LUXURY TIMBER VILLAS
Timber Provenance	Seasoned Canadian White Pine (12% Kiln-Dried)	Canadian Pine with European Spruce Accent Trusses
Wall Thickness Profiles	90mm / 120mm Solid Engineered Log Profile	140mm / 180mm Heavy-Timber Multi-Layer Insulated Wall
Fenestration & Glazing	Double-Glazed Argon Insulated Glass (U-value 1.2)	Triple-Glazed Panoramic Glass Curtain Walls (U-value 0.8)
Ideal Setting	Suburban estates, hill town residences, retreat plots	Golf course villas, luxury estates in Goa, Lonavala & Dehradun

COUNTRY CHARM & RUSTIC ELEGANCE

Wooden Cottages & European Farmhouses

Embodying pastoral warmth and timeless craftsmanship. Featuring generous wrap-around verandas, exposed timber rafters, warm rustic pine flooring, and stone-accented hearths.

WEEKEND SANCTUARY

Wooden Cottages (600 – 1,800 sq ft)

Engineered for compact hillside plots and farm acreage. Rapid dry construction allows hassle-free installation in remote locations with zero water tankers or cement mixers on site.

ESTATE LIVING

European Farmhouses (2,000 – 4,500 sq ft)

Designed for expansive agricultural land and multi-acre estates. Characterized by wide overhanging eaves for monsoon protection, country kitchens, and seamless indoor-outdoor transition decks.

ELEVATED LIVING

Wooden Stilt Houses & Architectural Treehouses

Engineered specifically for steep hillside contours, tropical plantation gradients, water bodies, and forest canopies without disturbing existing trees or requiring massive retaining walls.

<https://prefabwoodenhomes.com/pages/construction.php#sti...>
Home / Construction

Prefab Wooden Houses

Factory-engineered timber components assembled on-site in 8–12 weeks.

Prefabricated wooden homes are designed and manufactured off-site in a controlled factory environment, then transported and assembled at your chosen location. This method ensures consistent quality, reduced waste and significantly faster construction timelines compared to traditional building.

Our prefab homes range from compact single-bedroom cottages to spacious family residences, all fully customisable in layout, design and finish.

Factory-built precision with on-site assembly
Move-in ready in 8–12 weeks
Fully customisable floor plans and interiors
Transportable to any location across India
100% Termite Treated & FSC Certified Pine

Wooden Cottages

TERRAIN ADAPTABILITY

Wooden Stilt Houses

Built upon reinforced hot-dip galvanized steel or treated timber pilings. Eliminates costly hillside cut-and-fill excavation, preserving natural groundwater channels and preventing soil erosion.

CANOPY IMMERSION

Wooden Tree Houses

Engineered with non-invasive friction collar clamping technology that allows host trees to grow naturally without mechanical punctures. Features 360-degree viewing balconies.

ALPINE & GEOMETRIC PROFILES

Nordic Pine Chalets & Contemporary A-Frames

Striking architectural geometries engineered for high snow-load mountain regions and high-yield boutique hospitality glamping developments.

Nordic Log Chalet
ALPINE SNOW-READY

A-Frame Cabin
CATHEDRAL GLAZING

Riverside Chalet
THERMAL SHELL

ALPINE SNOW RESISTANCE

Nordic Pine Chalets

Steep 45-degree roof pitches prevent heavy snow buildup. Triple-sealed interlocking log joints and heavy thermal ceilings keep interiors cozy even in sub-zero Himalayan winters.

ARCHITECTURAL GEOMETRY

Contemporary A-Frame Cabins

An iconic triangle silhouette creating soaring double-height ceilings, a cozy loft bedroom, and an expansive front glass curtain wall framing uninterrupted wilderness vistas.

HIGH-YIELD HOSPITALITY

Resort Clusters, Luxury Pergolas & Gazebos

Comprehensive prefabricated building solutions for boutique hospitality investors, luxury eco-resort owners, wellness retreats, and outdoor estate pavilions.

COMMERCIAL CLUSTERS

Boutique Resort Chalets

Multi-unit developments delivered in parallel. Rapid 8–10 week prefabrication dramatically accelerates commercial launch dates and shortens loan interest periods.

OUTDOOR ARCHITECTURE

Timber Gazebos

Hexagonal and octagonal wooden gazebos constructed with weather-treated cedar or treated pine, perfect for garden seating, tea pavilions, and yoga decks.

SHADE STRUCTURES

Architectural Pergolas

Custom engineered open-air pergolas for poolside lounges, rooftop terraces, and vineyard walkways with optional polycarbonate weather roofing.

COMMERCIAL ADVANTAGE	PREFAB WOODEN HOMES SYSTEM	CONVENTIONAL RCC CONCRETE
Time to Market	8 TO 12 WEEKS (IMMEDIATE REVENUE)	14 to 24 Months (Delayed Revenue)
Environmental Impact	Zero foundation scars, eco-sensitive compliance	Heavy excavation, water contamination, debris
Guest ADR & Occupancy	Command 35%–50% higher room rates for wooden eco-villas	Standard commercial hotel room pricing

BUILT WORKS SHOWCASE

Case Studies: Mountain Resort & Timber Farmhouse

Realized architectural masterpieces demonstrating extreme climate endurance—from sub-zero Himalayan snowfall in Himachal Pradesh to heavy monsoon rain in the Western Ghats.

PROJECT 01 • HIMACHAL PRADESH

Mountain Resort Cottage

Location: Manali, HP • **Built Area:** 1,200 sq ft • **Timeline:** 75 Days

A cluster of three Nordic pine log cottages engineered for year-round luxury mountain hospitality. High-pitch roofs shed heavy winter snow naturally, while triple-glazed argon-filled windows trap ambient hearth heat.

PROJECT 02 • MAHARASHTRA

European Timber Farmhouse

Location: Lonavala • **Built Area:** 2,500 sq ft • **Timeline:** 90 Days

A 2-acre private country estate built with heavy-timber interlocking logs. Features a 10-foot wrap-around veranda engineered to withstand severe monsoon downpours while providing panoramic valley views.

BUILT WORKS SHOWCASE

Case Studies: Luxury Tropical Villa & Riverside Chalet

Engineered for distinct micro-climates—utilizing marine-grade stainless joinery against coastal saline air in Goa, and seismic dampening joinery along the river valley in Rishikesh.

PROJECT 03 • COASTAL GOA

Luxury Timber Villa

Location: North Goa • **Built Area:** 3,200 sq ft • **Timeline:** 85 Days

A two-storey contemporary tropical timber villa featuring cathedral ceilings, open-plan living pavilions, and private wooden sun-decks overlooking lush tropical landscaping.

PROJECT 04 • UTTARAKHAND

Nordic Pine Chalet

Location: Rishikesh • **Built Area:** 1,800 sq ft • **Timeline:** 60 Days

Nestled on the banks of the sacred river, this Scandinavian-inspired log chalet features high cathedral rafters, floor-to-ceiling panoramic glass walls, and an expansive cantilevered timber deck.

BUILT WORKS SHOWCASE

Case Studies: A-Frame Cabin & Eco Stilt Cottages

Showcasing harmonious architectural integration within coffee plantations and rainforest contours in Karnataka and Kerala with zero foundation destruction.

PROJECT 05 • KARNATAKA

Contemporary A-Frame Cabin

Location: Coorg • **Built Area:** 950 sq ft • **Timeline:** 45 Days

Modern architectural A-frame retreat featuring cathedral-height ceilings, a loft bedroom, and an expansive glass wall framing panoramic coffee plantation views.

PROJECT 06 • KERALA

Eco Stilt Resort Cottages

Location: Wayanad • **Built Area:** 850 sq ft x 6 • **Timeline:** 70 Days

Elevated stilt cottages constructed upon steep plantation slopes. Zero-excavation pilings preserve root systems and allow natural rainwater runoff without flash erosion.

TURNKEY PRECISION LIFECYCLE

The 5-Stage Prefabrication Methodology

A seamless, highly disciplined journey from custom 3D architectural conceptualization to high-precision CNC factory fabrication and rapid on-site modular assembly.

FACTORY PRECISION

CNC Joinery & VPI Chemical Treatment

Timber logs are shaped with millimeter tolerance. Logs undergo Vacuum Pressure Impregnation (VPI) with copper-based biocides, guaranteeing complete resistance to termites, borers, and dry rot.

DRY SITE CONSTRUCTION

Zero Water, Zero Mess Assembly

Components arrive pre-numbered in flat-packed containers. Our specialized crane crew erects the complete weather-tight shell in weeks without cement dust, noise, or prolonged neighborhood disruption.

BIOPHILIC SCIENCE & SUSTAINABILITY

Why Wood: Comparative Engineering Advantages

Modern timber construction outperforms conventional brick and concrete across thermal comfort, carbon footprint, seismic safety, and psychological well-being.

<https://prefabwoodenhomes.com/pages/why-wooden.php>

THE CASE FOR WOOD

Why Choose a Wooden Home?

Wooden homes offer a unique combination of beauty, performance and sustainability that no other building material can match.

Faster Construction

Prefabricated wooden components are manufactured off-site and assembled in weeks rather than months. A standard cottage can be

Energy Efficiency

Wood is a natural insulator — 15 times more efficient than masonry. Wooden homes stay warm in winters and cool in summers, reducing your

Natural Aesthetics

The warmth, texture and character of natural wood creates an atmosphere that simply cannot be replicated with concrete or steel. Every wooden

PERFORMANCE METRIC	SOLID ENGINEERED TIMBER	RCC CONCRETE & BRICK
Thermal Conductivity	0.13 W/MK (SUPERIOR NATURAL INSULATOR)	1.75 W/mK (Conducts heat & cold inside)
Carbon Footprint	CARBON NEGATIVE (−1 TON CO2 PER M³)	Heavy Carbon Emitter (+1.2 Tons CO2 per m³)
Seismic Performance	High elasticity absorbs Zone 4 & 5 shockwaves	Rigid & brittle; vulnerable to seismic fractures
Indoor Air Quality	Regulates relative humidity naturally between 40–60%	Traps moisture; prone to mold & damp seepage

VERIFIED REPUTATION

Client Endorsements & Homeowner Testimonials

Authentic voices of farmhouse owners, boutique resort directors, and retired military officers who entrusted their dream timber retreats to PWH India Venture LLP.

Vikram Malhotra

Farmhouse Owner, Lonavala

"Prefab Wooden Homes completed our 2,500 sq ft farmhouse in under 3 months. The Canadian pine quality and joinery exceeded all expectations. It stays cozy in winter and cool in summer."

Sunita & Rahul Singhal

Resort Directors, Manali

"We contracted them to construct 6 luxury log cottages for our retreat. From engineering drawings to handover, Aman and his crew were thoroughly professional. Guests constantly rave about the timber finish."

Col. Arvind Mehra (Retd.)

Villa Owner, Dehradun

"Their factory-prefabricated timber system meant zero construction clutter or long delays on our hillside plot. Termite treatment and water-proofing standards are truly world class."

Over 150+ Estates Handed Over Nationwide

From Himachal snowfields to Goa beaches, zero structural failures in 15+ years of operations.

4.9 / 5.0 ★

TECHNICAL CLARITY

Frequently Asked Questions & Technical Manual

Addressing core engineering considerations regarding termite protection, monsoon water-proofing, fire safety standards, and structural maintenance.

TERMITE & BORER PROTECTION

How is timber protected against pests?

Logs undergo high-pressure autoclave Vacuum Pressure Impregnation (VPI) with copper boron formulations that deeply penetrate cellular fibers, rendering the timber non-nutritive to termites and borers.

MONSOON WEATHERING

Can wooden homes withstand Indian monsoons?

Yes. Outer walls are treated with microporous UV and hydrophobic nano-sealants that repel driving rain while allowing internal timber breathability, preventing swelling or warping.
